Spillo

100% Italian cold brew

NATURAL BORN COLD

V·S·E
VERY SPECIAL ESPRESSO

100% ITALIAN RECIPE.

Spillo was born in 2019, from an ancient recipe called Super Bar. In the 50's Mokaor was looking for the lightest roasting, so en vogue today. Super Bar was born in that years to respond at the growing demand for a sweetest and scented espresso blend. Today is a landmark for whom is looking for an easily digestable, perfumed and sweet coffee.

BORN COLD.

Cold Brew is a cold water steeping process for coffee. It's a unique thing. Cold water extraction gives coffee a very low level of sourness, and very little bitter flavours, for a result that could be easily tolerated also for people who suffers from digestive disorders. The real benefit of this method is the sweet natural taste, without the addition of sugar and with a good amount of caffeine.

COLD CONSERVED:

We'we choosen HPP-Process for his preservation. It's a food conservation and sterilization technique, through which the product is compressed by the high pressure, causing the inactivation of some microorganisms and enzymes present in the food. HPP technique has a limited effect on the covalent bonds of the product, thus maintaining his sensorial and nutritional qualities.

Such a fragrant and delicate product could not have been heated to high temperatures with the HPP-Process.

COLD BREWED:

The aid of Nitrogen during the tapping gives a very nice intensity to the coffee, producing a "cascade" effect just like a stout beer, making it even more beautiful and "Ready to Drink". The Spillo column, a great innovation in the beverage sector studied with great care by our technicians, thanks to the strong visual impact and advanced tapping technology, allows even the biggest places to deliver perfectly Spillo products as well as a guaranteed visibility and success.
